WEBSITE PROPOSAL: AUTOCARE SERVICE

1. Organisation Overview

Name: AutoCare Service

Brief History:
AutoCare Service is a start-up concept designed to address inefficiencies in traditional vehicle servicing systems. The idea emerged from the observation that many local garages still rely on outdated booking methods such as phone calls and walk-ins, creating inconvenience for customers. The business aims to modernize this process through a digital solution.

Mission Statement:
To provide a convenient, transparent, and accessible platform for vehicle servicing through digital innovation.

Vision Statement:
To become a leading online platform for vehicle maintenance bookings, improving customer experience and operational efficiency in the automotive service industry.

Target Audience:

- Car owners in urban areas
- Working professionals who prefer convenience
- Young, tech-savvy drivers
- Customers seeking transparent pricing and quick service

---

2. Website Goals and Objectives

Goals:

- Increase accessibility to vehicle servicing
- Provide a seamless online booking experience
- Improve transparency in pricing and services
- Generate consistent customer bookings

Key Performance Indicators (KPIs):

- Number of website visitors
- Number of bookings made
- Customer retention rate
- Conversion rate (visitors to bookings)

---

3. Current Website Analysis

AutoCare Service currently has a website that is still under development. The platform already provides important information such as available vehicle services, detailed descriptions, and pricing, allowing customers to understand what is offered before making a booking.

Strengths:

- Clear display of services and pricing improves transparency
- Provides detailed information about what each service includes
- Gives customers a better understanding of maintenance options
- Establishes an online presence for the business

Weaknesses:

- Website is still under construction
- Online booking functionality may not yet be fully implemented
- Limited interactivity and user engagement features
- May not yet be fully optimized for mobile devices

Opportunities for Improvement:

- Implement a fully functional online booking system
- Improve user interface and overall design
- Ensure mobile responsiveness across devices
- Add customer features such as booking history or notifications

---

4. Proposed Website Features and Functionality

The AutoCare Service website will include:

- **Homepage** – Overview of services and value proposition
- **About Us Page** – Company background and mission
- **Services Page** – List of available vehicle services with pricing
- **Booking System** – Online appointment scheduling (will be added soon)
- **Contact Page** – Customer support and inquiries

Core Functionality:

- Browse services
- View pricing
- Book appointments online
- Contact service providers easily

---

5. Design and User Experience

Colour Scheme:

- Professional tones (e.g., blue, black, white) to reflect trust and reliability

Typography:

- Clean and modern fonts (e.g., sans-serif for readability)

Layout and Design:

- Simple, user-friendly interface
- Clear navigation structure
- Mobile-responsive design

User Experience Considerations:

- Easy navigation
- Fast loading times
- Clear call-to-action buttons (e.g., “Book Now”)

Wireframes:
Low-fidelity wireframes will be developed to visualize layout and structure before development.

---

6. Technical Requirements

- **Hosting & Domain:** Reliable web hosting service and domain registration
- **Technologies Used:**
  - HTML (structure)
  - CSS (design)
  - JavaScript (interactivity)
- Optional future enhancements:
  - Backend integration for bookings
  - Database for customer data

7. Timeline and Milestones

The project will follow a structured timeline aligned with submission deadlines and development phases.

Milestone	Description	Target Date
Planning & Research	Define requirements, analyse market, plan website structure	March 2026
Website Prototype	Develop initial design and layout (wireframes & basic pages)	April 2026
Website Development	Build core website pages and implement functionality	May 2026
Testing Phase	Test usability, fix bugs, and improve performance	June 2026
Website Launch	Deploy the website for public use	July 2026
Growth Phase	Reach first 100 bookings and improve features	August 2026
Partnerships	Establish collaborations with local garages	December 2026

8. Budget

The estimated budget reflects realistic costs for development, hosting, and maintenance.

Total Estimated Budget: R50,000

Breakdown:

- Website Development: R20,000
- Marketing: R15,000
- Operations: R10,000
- Maintenance: R5,000

Additional Considerations:

- Hosting and domain registration costs
- Future upgrades and feature enhancements
- Ongoing maintenance and support
